UVOD

Ovaj projekat predstavlja izradu interaktivne web aplikacije iz predmeta Web Programiranje 2. Tema sajta je online prikaz i kupovina kozmetičkih proizvoda.

Cilj projekta je bio implementacija dinamičkog prikaza sadržaja korišćenjem JSON fajlova i AJAX tehnologije, kao i realizacija funkcionalnosti kao što su filtriranje, sortiranje, paginacija (load more), lokalno skladištenje podataka i validacija forme.

Aplikacija je razvijena kao nadogradnja prethodnog projekta iz predmeta Web Programiranje 1.

OPIS PROJEKTA

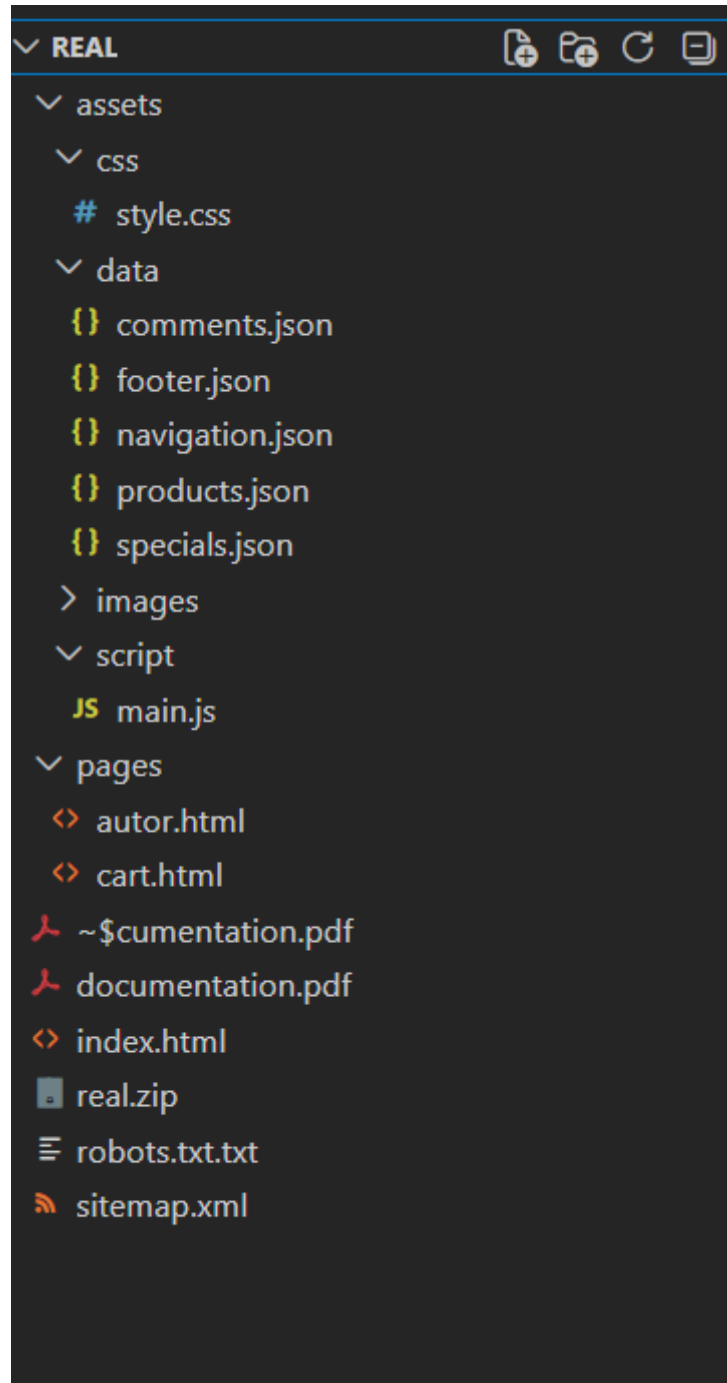

Web aplikacija „RealBeauty“ omogućava korisnicima pregled kozmetičkih proizvoda, njihovo filtriranje po kategorijama i tipu kože, sortiranje po različitim kriterijumima, kao i dodavanje proizvoda u korpu.

Aplikacija sadrži više stranica:

- Početna stranica sa proizvodima
- Stranica sa korpom
- Stranica o autoru
- Dokumentacija

Svi ključni delovi aplikacije (proizvodi, navigacija, komentari, footer) učitavaju se dinamički iz JSON fajlova putem AJAX poziva.

STRUKTURA PROJEKTA

TEHNOLOGIJE

U projektu su korišćene sledeće tehnologije:

- HTML5 – za strukturu stranica
- CSS3 i Bootstrap – za stilizaciju i responsive dizajn
- JavaScript (ES6) – za logiku aplikacije
- jQuery – za AJAX pozive i manipulaciju DOM-a
- JSON – za skladištenje podataka
- Local Storage – za čuvanje podataka o korpi

OPIS FUNKCIONALNOSTI

Json i Ajax

Podaci u aplikaciji se učitavaju iz JSON fajlova korišćenjem AJAX tehnologije.

Kreirana je univerzalna funkcija:

```
loadDataFromJson(path, successCallback, errorCallback)
```

koja omogućava ponovno korišćenje koda za učitavanje različitih JSON fajlova (proizvodi, navigacija, komentari, footer).

Primer poziva:

- učitavanje proizvoda
- učitavanje navigacije

JSON fajl za proizvode sadrži ugnježdene strukture (price, images, labels), čime je ispunjen zahtev za kompleksnost podataka.

Prikaz proizvoda

Proizvodi se dinamički generišu u JavaScript-u i ubacuju u HTML pomoću DOM manipulacije.

Svaki proizvod sadrži:

- naziv
- kategoriju
- tip kože
- ocenu
- cenu (regularnu i sniženu)
- oznake (labels)
- sliku

Prikaz se realizuje kroz funkciju `renderProducts()`.

Filtriranje, sortiranje i load more

Aplikacija omogućava filtriranje proizvoda po:

- kategoriji
- tipu kože
- nazivu (search)

Sortiranje je moguće po:

- ceni rastuće i opadajuće
- oceni
- nazivu

Za paginaciju je korišćen "Load More" princip, gde se proizvodi učitavaju postepeno.

Ove funkcionalnosti su međusobno povezane i rade zajedno.

Korpa (local storage)

Korpa omogućava:

- dodavanje proizvoda
- povećanje i smanjenje količine
- brisanje proizvoda
- prikaz ukupne cene

Podaci o korpi čuvaju se u Local Storage-u pomoću JSON formata.

Ključ:

CART_KEY = "real_cart"

Prilikom učitavanja stranice, podaci se učitavaju iz Local Storage-a i prikazuju korisniku.

Forma i validacija

Forma omogućava unos podataka korisnika.

Korišćeni elementi:

- text input (ime, prezime)
- email
- password
- select (grad)
- radio (tip kože)
- checkbox (uslovi)

Validacija se vrši pomoću regularnih izraza:

- ime i prezime
- email
- lozinka

Korisniku se prikazuju poruke o greškama i uspešnom unosu.

Obrada grešaka

U aplikaciji je implementirana obrada grešaka:

- try/catch blok prilikom čitanja Local Storage-a
- validacija podataka u formi
- poruke korisniku u slučaju grešaka (npr. učitavanje proizvoda)
- poruke kada nema rezultata ili je korpa prazna

TEMPLATE

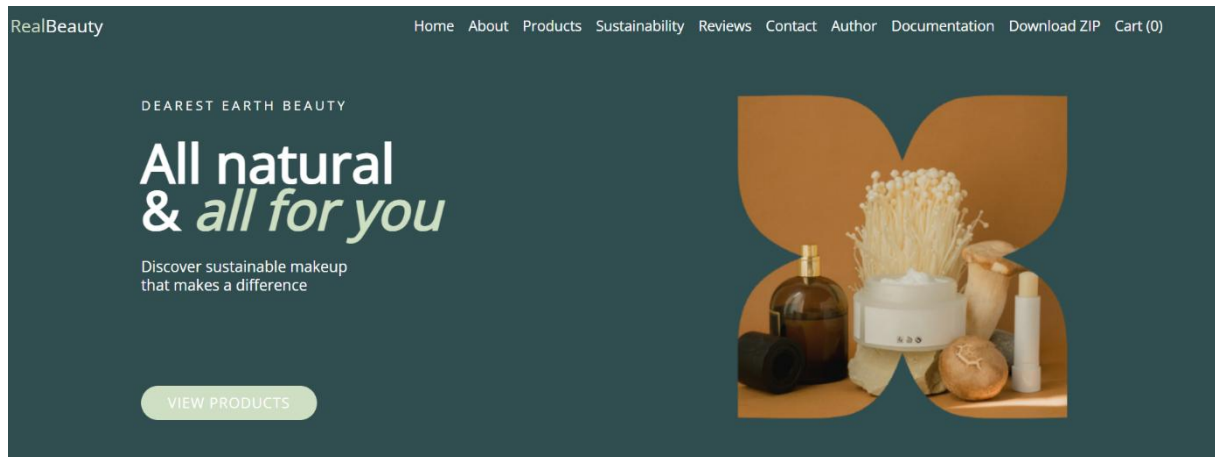

Za izradu sajta nije korišćen gotov template.

Slike i opis funkcionalnosti

Navigacija učitana is JSON-a korišćenjem AJAX tehnologije. Preko svakog elementa liste je uradjen hover kad se pređe mišem preko svakog elementa promeni se boja slova.

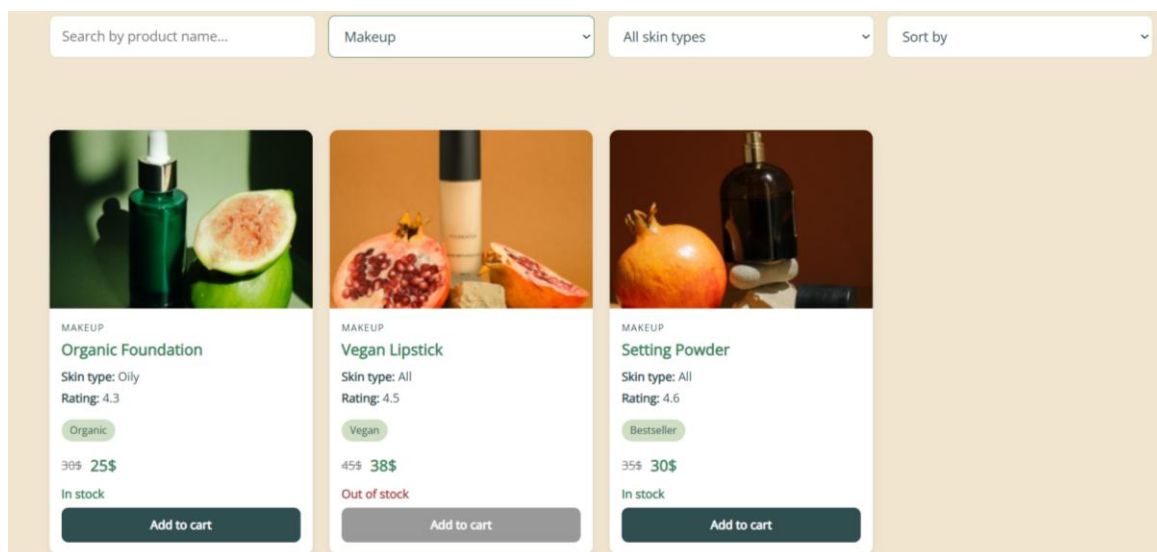

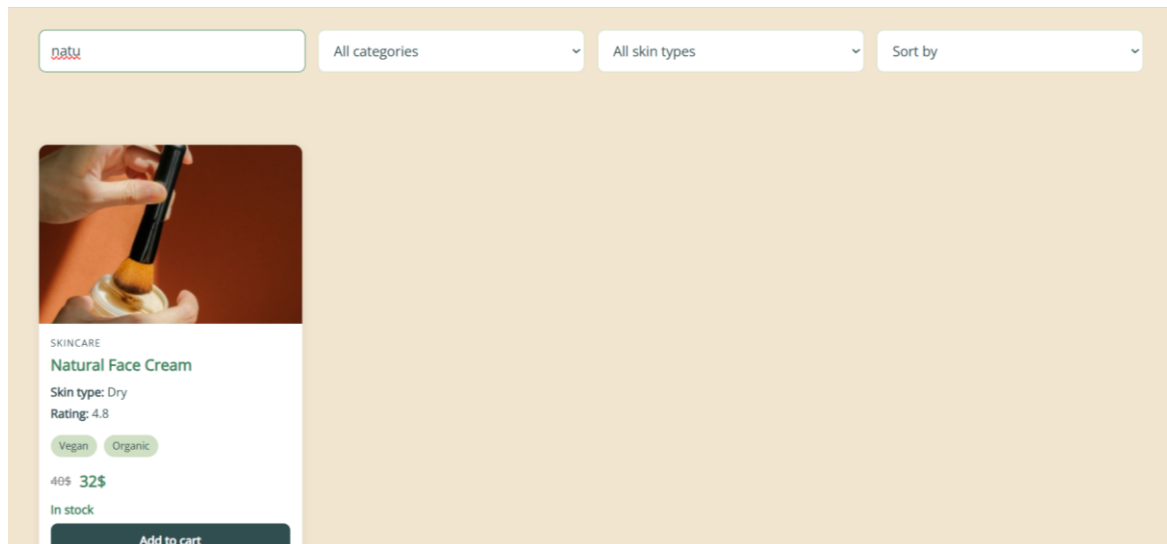

Countdown (odbrojavanje) do početka finalnih sniženja proizvoda u aprilu 2026.

Sekcija za filtriranje i sortiranje proizvoda. Unosom naziva proizvoda u polje za pretragu izdvaja se samo taj proizvod. Izborom kategorije iz padajuće liste prikazuju se samo proizvodi koji pripadaju izabranoj kategoriji. Isto važi i za tipove kože, izborom tipa iz padajuće liste

prikazuju se samo proizvodi pogodni za taj tip kože. Proizvode možemo sortirati po nazivu, ceni (rastuće i opadajuće) i po oceni. Ove funkcionalnosti su međusobno povezane i rade zajedno.

Load more

Proizvodi učitani iz JSON-a korišćenjem AJAX tehnologije. Klikom na add to cart dugme proizvod se dodaje u korpu i korisnik dobija poruku o uspesnom dodavanju. Za paginaciju je korišćen "Load More" princip, gde se proizvodi učitavaju postepeno.

Proizvodi dodati u korpu se prikazuju na cart stranici. Svakom proizvodu možemo klikom na plus povećati a na minus smanjiti količinu. Klikom na remove dugme uklanjamo proizvod iz korpe. Svaki put kada proizvod dodamo ili uklonimo ukupan iznos za plaćanje se menja.

Specials i komentari sekcije su isto ispisane iz Json-a. Komentari ubačeni u slajder.

                <h1>Sandra Oraovčić </br> 98/21</h1>
                <p>My name is Sandra and I am studying web programming at ICT. I
love creating beautiful and practical websites and
                I am always happy when I learn something new. I played folk
dance for a long time, so I am used to teamwork, rhythm,
                and discipline. When I am not at the computer, I enjoy
traveling, a good book, and spending time with friends.</p>
